## Basis for creation

ALANS surveying company cooperates with the giants of the fuel and energy complex, and masters new business areas

by Aleksandr Chernovsky

Russian cities boast the streets with unusual names – Visionaries' Street, Dreamers' Street, Enthusiasts' Avenue. They are dedicated to the pioneers of the twentieth century – geologists and land surveyors, people of difficult but interesting professions. Somewhat daydreamers, conquerors of nature and space, successors of those who distinguished themselves in the Age of Discovery. Persistent and rugged, courageous and reliable, professionals of the comfortable and cozy 21st century who are ready to face cold and heat, mud and downpours, gnats and wild animals, they beat a path for the others to allow constructing buildings, paving roads, and bringing infrastructure, heat and electricity in the wilderness. These men's mission is to be surveyors.

Incorporated in 1999, ALANS company from Irkutsk has been holding firm position in the engineering surveys

**MORE THAN 400 EMPLOYEES USE THEIR KNOWLEDGE, EXPERIENCE, AND CORPORATE LOYALTY TO STEADILY HELP THE COMPANY MOVING FORWARD**

market for more than ten years and now it is successfully entering the design market.

Creation of mapping information, cadastral works, geodetic control network, technical inventory, assessment, airborne laser scanning and digital aerial photography,

development of layout maps and area demarcation designs – this is what ALANS does today in addition to engineering surveys.

“Our concept is to provide the customers with a package of works satisfying all requirements of the Russian laws”, Valery Cherezov, ALANS General Director, says.

Company projects include engineering surveys in the largest oil and gas-condensate fields of Russia – Kamennomyskoe, En-Yakhinskoe, Kovyktinskoe, Srednebotuobinskoe, and Chayandinskoe. Works in Rosneft license blocks in Irkutsk Oblast, Krasnoyarsk Krai, and Yakutia. Works on Transneft sites in Krasnoyarsk Krai, Khabarovsk Krai, and Irkutsk Oblast.

The company is particularly proud of fulfilment of cadastral works and creation of geodetic control network for the trunk pipeline called “Power of

Siberia” – this pipeline is a critical strategic, economic and social element of the future gas supply system in the Russian East and, therefore, it does not require any additional explanations or promotion.

Recognizing the customer's demand for soil structural materials, in 2014 the company stroke out a new line for itself – it started developing the fields of widespread mineral deposits (WSMD). Our company renders a package of services from exploration of WSMD open pits to obtaining of permits for their operation. We have developed the necessary papers and received authorizations for WSMD production for the number of facilities that are being constructed for Transneft, Rosneft, and Gazprom.

Today, ALANS has vast experience of work everywhere from Yamal-Nenets Autonomous District to Primorsky Krai, it operates actively in Irkutsk Oblast and Yakutia.

Valery Cherezov, ALANS General Director, gathered a team of professionals who are ready to fulfil the most complicated projects

The company enjoys the newest technical equipment. It includes high-precision airborne laser scanners by Optech (Canada) and Leica (Switzerland). There is not more than a dozen of such scanners in Russia.

“Moreover, for our work we use satellite geodetic receivers, electronic tachometers, equipment for geodetic, geological, and ecological measurements and tests”, Valery Cherezov noted. Several years ago, the company's production facilities were strengthened through creation of its own soil laboratory.

ALANS has branches and standalone divisions in Bratsk, Tayshet, Blagoveshchensk, and Lensk. The company employs candidates of technical sciences; therefore, the level of competence is very high. More than 400 employees use their knowledge, experience, and corporate loyalty to steadily help the company moving forward.

What is the secret of this Siberian team's success?

We believe that the success results from adherence to the principles underlying the company's philosophy. Each of the company employees understands and prides to provide services to the society, which ultimately benefits from their efforts! Therefore, our motto is “The Customer should always be happy!
